```python
import random

temp = random.randrange(24, 38)

hmdty = random.randrange(30, 80)

print(temp, hmdty)

if(temp>30):

    if(hmdty>60):

        print("Alert")

    else:

        print("High temperature detected")

elif(temp==30):

    print("Temperature reaches the threshold value")

else:

    print("Comfortable condition")
```
